

"Our expertise provides you an advantage for your early drug development success"

AEPODIA provides scientific consultancy and operational support with high expertise to optimize your early drug development program and your medical devices in order to maximize the success of your early clinical trials. Aepodia is internationally recognized as a reliable partner using Best Fit solutions with a lean & flexible organization and processes leading to cycle time reduction and decreased costs.

Early Clinical Development

"Our services are as unique as your discoveries"

ANS Biotech supports drug discovery and development efforts of companies involved in human and animal health, food and nutrition, by providing them with an extensive expertise in preclinical pain research as well as a strong background in Research & Development for new analgesics:

- Consulting activities
- *In vivo* pharmacology services & preclinical pain profiling
- R&D Project management

In vivo Pharmacology

"Need to solve the equation: imagination vs. technical reality + cost control?"

By proposing innovative drug delivery systems and strong know-how in formulation, APTYS can help you develop a drug product out of your drug candidate.

- Consulting activities up to first-in-man studies
- Design and formulation development
- Analytical development and validation
- Support to production
- ICH stability studies

"Seamless Drug Development from Bench to Market"

CARBOGEN AMCIS exists to provide innovative solutions for drug development and supply to the pharmaceutical and biopharmaceutical industries that enable customers to bring new generation medicines to market.

- Early stage APIs : Process research and rapid supply of APIs prepared according to non/cGMP
- Late stage APIs : Process development and cGMP manufacture Commercial APIs : Process optimisation-FDA Audited
- High Potency services: for small molecules or conjugated drugs. From 10 L to 1600 L. Toxicity level up to category IV.
- Drug Product : formulation and GMP production of Sterile IMPs
- Others: ICH stability studies, peptides synthesis, Pre-formulation development..

"Together a step forward for mankind"

CERB is an internationally active preclinical contract research organization (CRO). For the pharmaceutical industry, CERB offers the complete safety evaluation in toxicology and pharmacology as required for Phase I clinical trials of new molecules.

- High specialization in cardiovascular pharmacology, telemetry, electrophysiology and central nervous system
- And in other fields, numerous models for evaluation of primary and secondary pharmacology function
- A sophisticated network of experts being outstanding in their respective complementary working disciplines, in order to keep us with the most recent, interlinked advances in biomedical sciences

Clinical Investigation Centre

With a renowned expertise in clinical investigation of analgesics, CIC 501 takes advantage of modern facilities in the Regional University Hospital to conduct not only standard clinical trials (phases I to III) but also PK/PD studies and translational research pointed on clinical proof of concept.

- Expertise in pharmacological exploration of analgesics
- Development of new methods and models
- Physiopathological evaluation of chronic pain

"Your customized development & clinical supplies partner"

Creapharm is a medium size European group, offering a reactive and customized service to its clients through the following services:

- Pharmaceutical Development
- GMP Parenterals Production
- GMP Capsules Production and Blinding
- GMP Primary and Secondary Packaging, Labeling
- IMP importation into Europe, IMP distribution worldwide and management of returns
- International depots network
